Bachelor of science program outcome

(Implemented from 2021-22)

- Students should have a strong foundation of scientific knowledge and principles relevant to their chosen field, enabling them to understand and analyze complex scientific concepts.
- To make students possess strong analytical and problem-solving skills, allowing them to identify and solve scientific and technical challenges.
- To develop proficiency in mathematics and quantitative analysis, which are crucial for data analysis, modeling, and experimentation.
- To improve skills associated with hands-on experience in laboratories, conducting experiments, collecting data, and applying scientific methods.
- Made students familiar in research methodologies, enabling them to design and conduct experiments, analyze data, and contribute to scientific advancements.
- To made students familiar in use of technology, software, and equipment relevant to their discipline.
- To inculcate skill at collecting, organizing, and interpreting data, for drawing meaningful conclusions and making informed decisions.
- Students can able to effectively communicate scientific information through writing, presentations, and other forms of communication.
- To develop knowledge of ethical conduct in scientific research and professional approach.
- To develop interdisciplinary approaches, encouraging students to integrate knowledge from multiple scientific fields.
- To make them work in interdisciplinary teams, requiring effective communication and collaboration skills.
- Make students prepared to adapt to new technologies, emerging scientific trends, and innovative approaches within their field.
- Make student aware to further education, such as graduate or professional programs, or directly to careers in various fields, such as research, engineering, healthcare, technology, and more.
