Water Conservation Policy

Water is an important natural resource and a basic human need. Water scarcity is one growing concerns of the present times, the ultimate solution for which is water conservation. Issues related to water governance have not been addressed adequately. In this context our institute is committed to rain water harvesting and sustainable water management. We have taken several initiatives to conserve water such as rain water harvesting from rooftop run-offs, creation of pond/trenches and bore well recharge system, maintenance of water distribution system etc. Therefore, institute make a policy for water conservation and sustainable maintenance of resources.

Objectives

- 1.To collect rain water in natural way from rooftops of all buildings, open spaces and college ground without disturbing the ecosystem.
2. To reduce water consumption using proper disposal of waste water
3. To monitor water utilization properly reserved in storage tanks of each building
- 4.To use human resource control over water supply and water used for gardening

Water Conservation Policy

Rain water harvesting from rooftops of all buildings, open spaces and college ground to conserve in the recharge well. Water storage tanks are made available in each building with float valves. There is a dedicated manpower water supply for fresh water and garden use. Effective monitoring of water supply, and instant repairing of water leakage and control on overflow RO and water cooler are used to facilitate safe and clean drinking water as well as to reduce water wastage.
